

The other side of Go

Programming Pictures

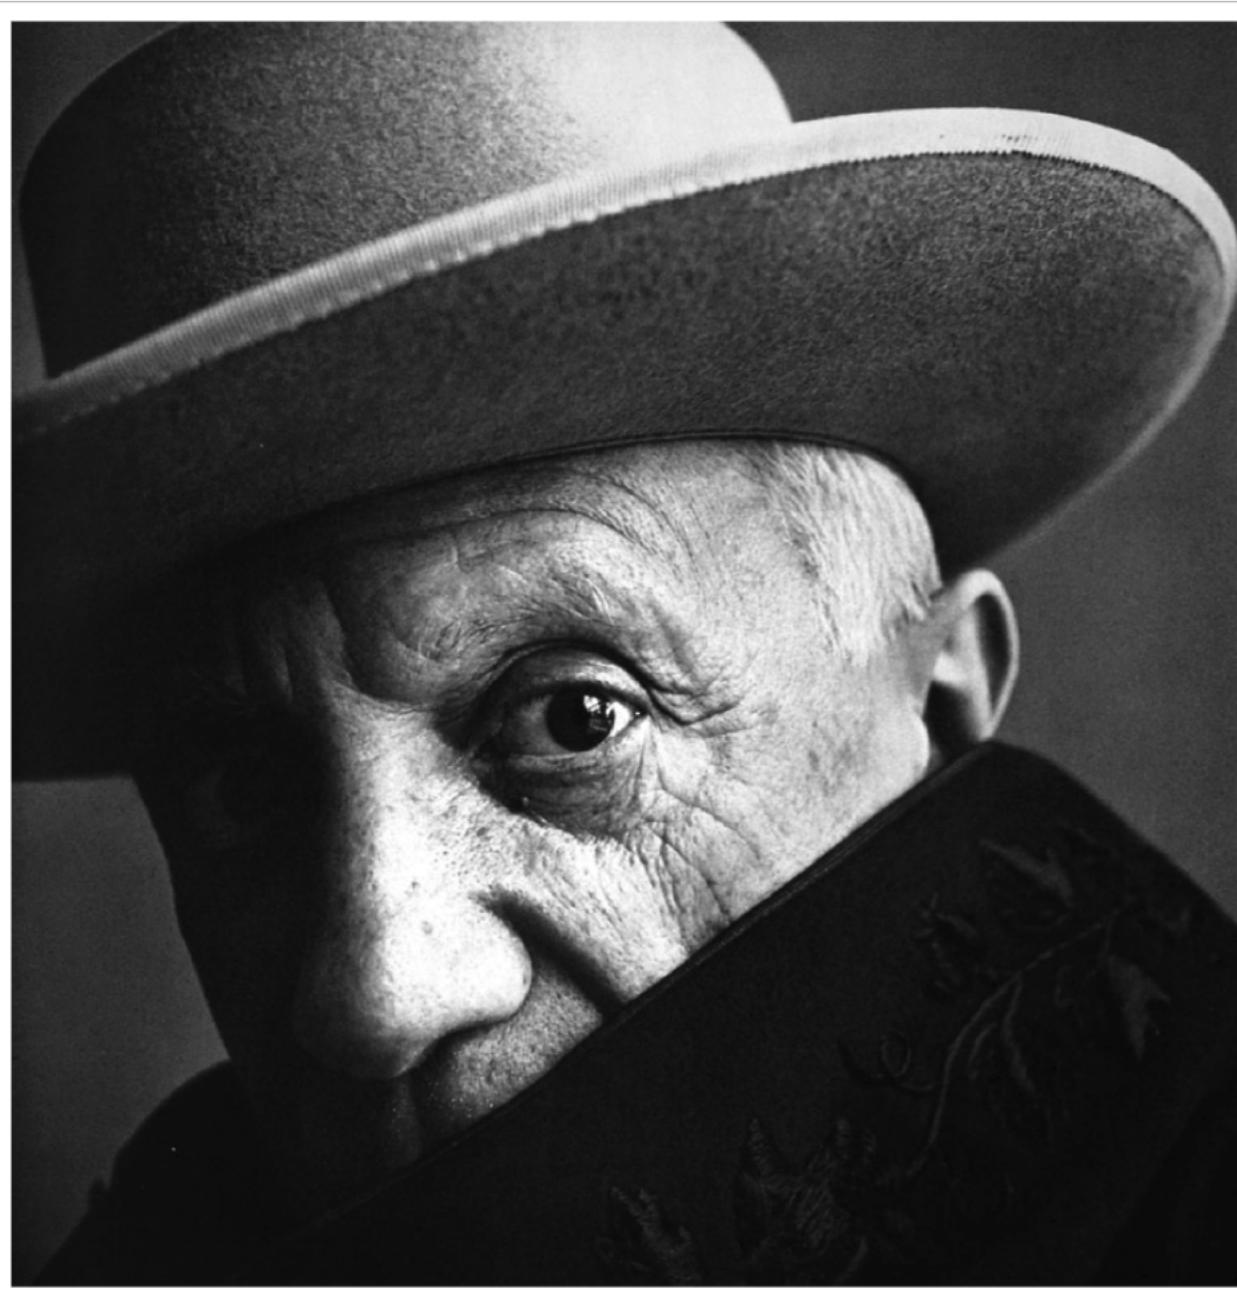

Anthony Starks

Go is great in the back end

A photograph of a dramatic sky. The upper portion of the image is filled with large, white, billowing cumulus clouds against a dark blue background. In the lower portion, there are darker, more textured clouds, possibly cumulonimbus or stratus. The overall mood is serene and majestic.

But sometimes it's about the picture

Sample Bullet Graph

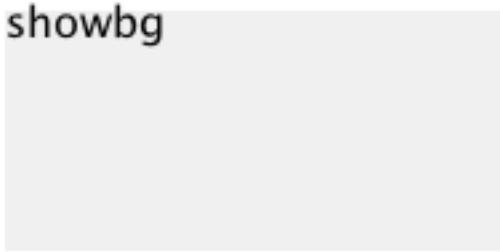

The bullet graph features a single, primary measure (for example, current year-to-date revenue) compares that measure to one or more other measures to enrich its meaning, for example, compared to a target), and displays it in the context of qualitative ranges of performance, such as poor, satisfactory, and good.

The qualitative ranges are displayed as varying intensities of a single hue to make them discernible by those who are color blind and to restrict the use of colors on the dashboard to a minimum.

OpenVG on the Raspberry Pi

Joshua Tree National Park

Why I use Go

Anthony Starks

@ajstarks
ajstarks@gmail.com

```
package main
import "fmt"

func main() {
    fmt.Println("hello, world")
}
```

This is the traditional hello, world program.
It's six lines long, and imports the fmt package,
leading some to be surprised at the size of the resulting binary.

openvg

```
package main

import (
    "bufio"
    "github.com/ajstarks/openvg"
    "os"
)

func main() {
    width, height := openvg.Init()

    w2 := openvg.VGfloat(width / 2)
    h2 := openvg.VGfloat(height / 2)
    w := openvg.VGfloat(width)

    openvg.Start(width, height)                      // Start the picture
    openvg.BackgroundColor("black")                  // Black background
    openvg.FillRGB(44, 100, 232, 1)                // Big blue marble
    openvg.Circle(w2, 0, w)                         // The "world"
    openvg.FillColor("white")                       // White text
    openvg.TextMid(w2, h2, "hello, world", "serif", width/10) // Greetings
    openvg.End()                                    // End the picture
    bufio.NewReader(os.Stdin).ReadBytes('\n')        // Pause until [RETURN]
    openvg.Finish()                                // Graphics cleanup
}
```

go

build	compile packages and dependencies
clean	remove object files
env	print Go environment information
fix	run go tool fix on packages
fmt	run gobfmt on package sources
generate	generate Go files by processing source
get	download and install packages and dependencies
install	compile and install packages and dependencies
list	list packages
run	compile and run Go program
test	test packages
tool	run specified go tool
version	print Go version
vet	run go tool vet on packages

This is not a index card

Misery

We have each other

Poor

A few months ago, I had a look at the brainchild of a few serious heavyweights working at Google. Their project, the Go programming language, is a static typed, c lookalike, semicolon-less, self formatting, package managed, object oriented, easily parallelizable, cluster fuck of genius with an unique class inheritance system. It doesn't have one.

The Go Programming Language

is a static typed,
c lookalike,
semicolon-less,
self formatting,
package managed,
object oriented,
easily parallelizable,
cluster fuck of genius
with an unique class inheritance system.

The Go Programming Language

is a static typed,
c lookalike,
semicolon-less,
self formatting,
package managed,
object oriented,
easily parallelizable,
cluster fuck of genius
with an unique class inheritance system.

The Go Programming Language

is a static typed, c lookalike, semicolon-less, self formatting,
package managed, object oriented, easily parallelizable,
cluster fuck of genius with an unique class inheritance system

It doesn't have one.

So, the next time you're
about to make a subclass,
think hard and ask yourself

what would Go do

Andrew Mackenzie-Ross

Python and Ruby programmers come to Go because they don't have to surrender much expressiveness, but gain performance and get to play with concurrency.

Less is exponentially more
Rob Pike

A wide-angle photograph of a dramatic sky. The upper portion is dominated by dark, heavy clouds, with a bright, overexposed area where the sun is partially visible, creating a lens flare effect. Below this, the sky transitions into a lighter blue with scattered, more wispy white clouds.

You must not blame me if I do talk to the clouds.

FOR, LO,

the winter is past,
the rain is over and gone;
The flowers appear on the earth;
the time for the singing of birds is come,
and the voice of the turtle is heard in our land.

Song of Solomon 2:11-12

Good Design

is innovative

makes a product useful

is aesthetic

makes a product understandable

is unobtrusive

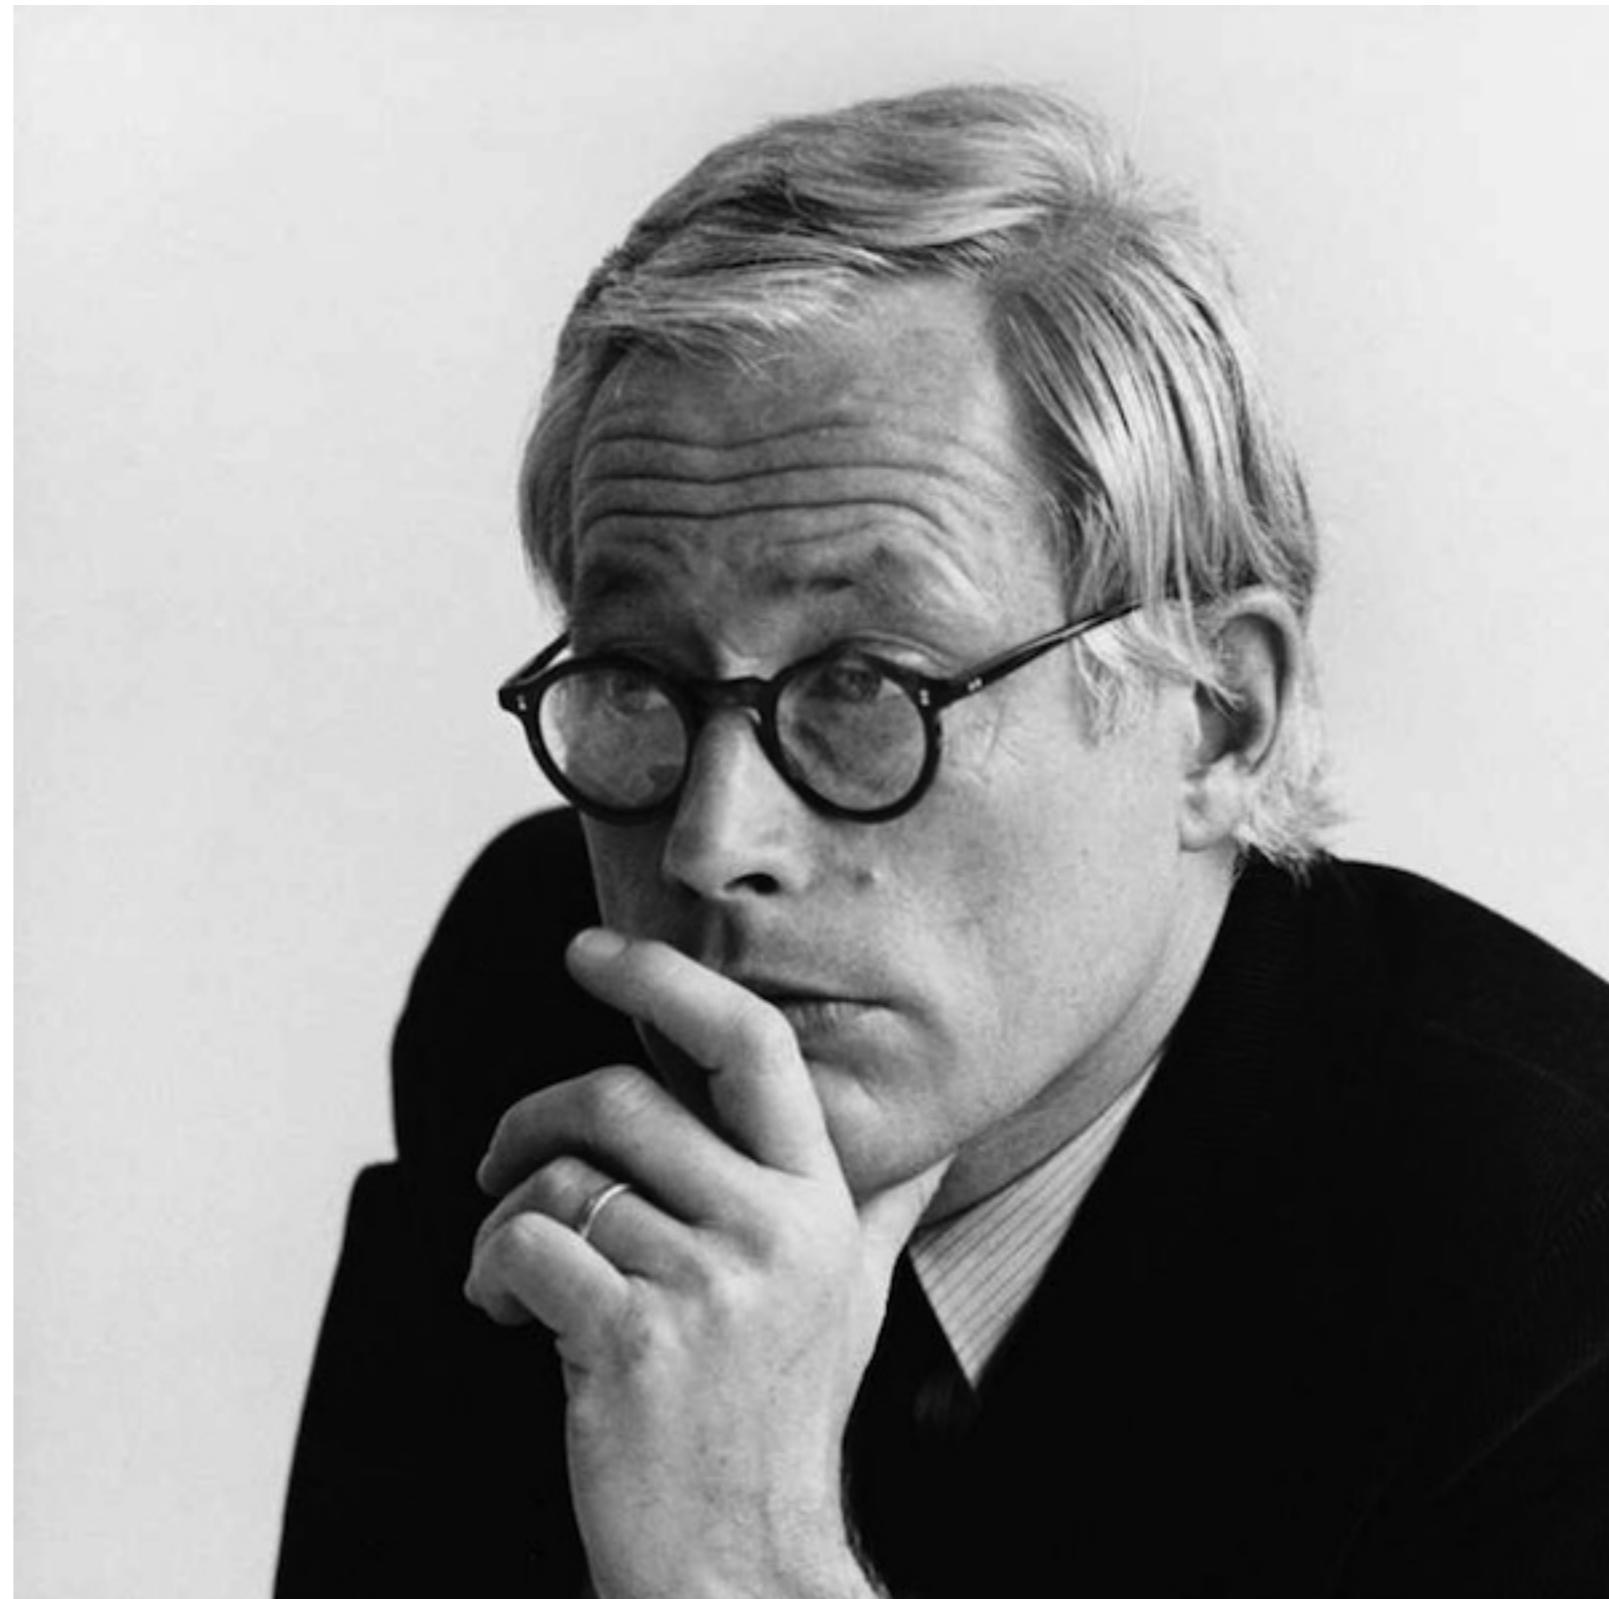

is honest

is long-lasting

is thorough down to the last detail

is environmentally-friendly

is as little design as possible

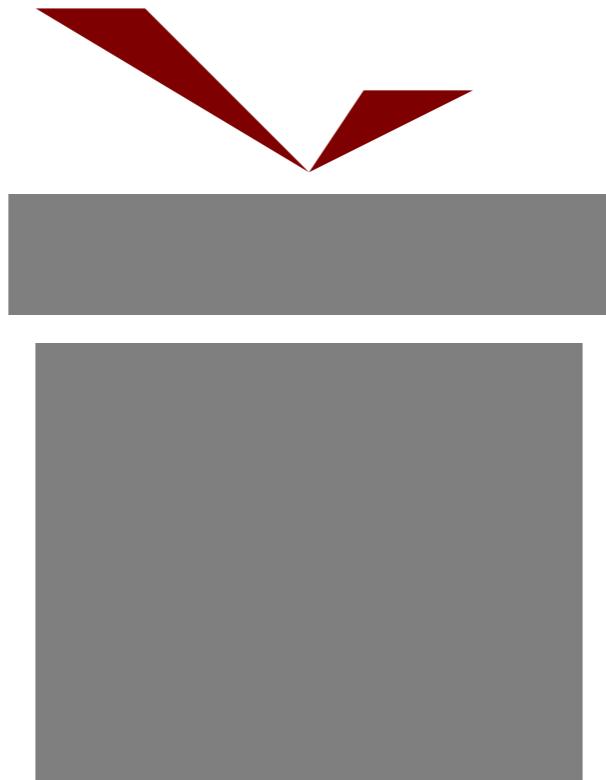

Dieter Rams

You've got to start with the customer experience and work back toward the technology, not the other way around.

Steve Jobs

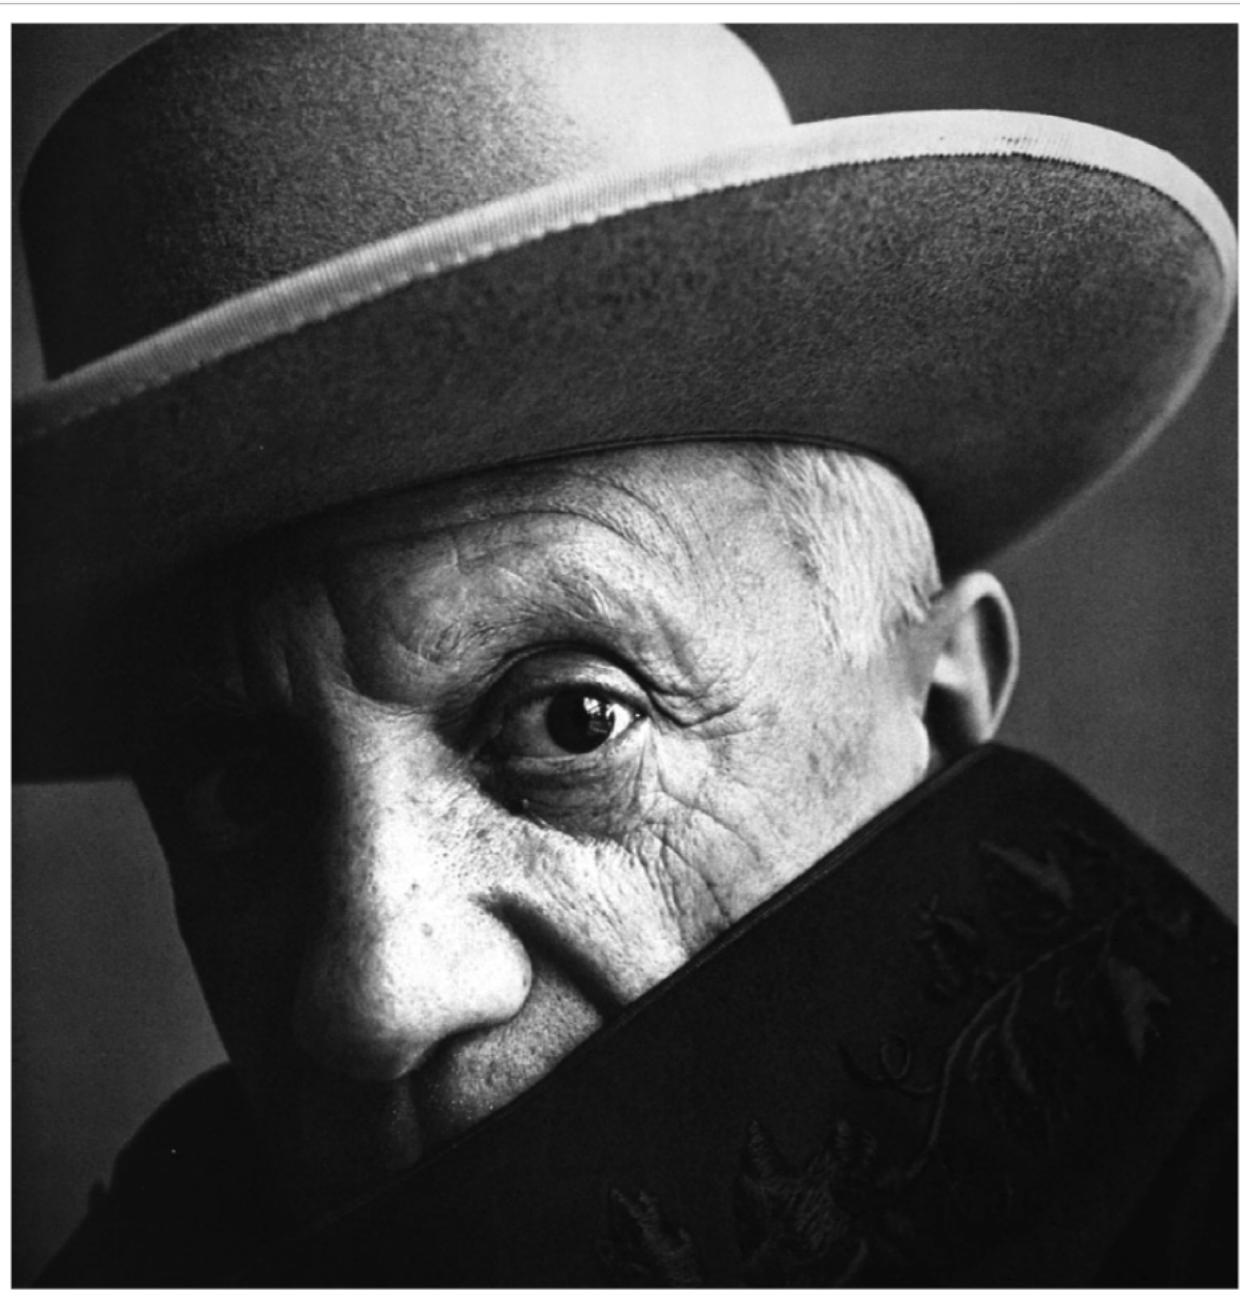

gift

Go Image Filtering Toolkit

gift -contrast 80 -blur 4 rocks.jpg > abstract.jpg

-blur=0: blur value	-max=0: local maximum (kernel size)
-brightness=-200: brightness value (-100, 100)	-mean=0: local mean filter (kernel size)
-contrast=-200: contrast value (-100, 100)	-median=0: local median filter (kernel size)
-crop="": crop x1,y1,x2,y2	-min=0: local minimum (kernel size)
-edge=false: edge	-resize="": resize w,h
-emboss=false: emboss	-rotate=0: rotate specified degrees counter-clockwise
-fliph=false: flip horizontal	-saturation=-200: saturation value (-100, 500)
-flipv=false: flip vertical	-sepia=-1: sepia percentage (0-100)
-gamma=0: gamma value	-sigmoid="": sigmoid contrast (midpoint,factor)
-gray=false: grayscale	-transpose=false: flip horizontally and rotate 90° counter-clockwise
-hue=-200: hue value (-180, 180)	-transverse=false: flips vertically and rotate 90° counter-clockwise
-invert=false: invert	-unsharp="": unsharp mask (sigma,amount,threshold)
